SECURITY
LEVEL

HoloKote®

We're all about security. That's why we developed the HoloKote® watermark available for all of our printers direct-to-card and retransfer printers.

HoloKote® technology was pioneered by Magicard to apply a secure watermark to each card during the printing process. This feature exploits the wavelengths and lens effect of the film to fluoresce under UV lighting conditions.

Custom HoloKote®

This feature, available on some of our models, facilitates the implementation of a personalised HoloKote® watermark into the standard print process. This watermark could be an organisation's logo, or some other unique security design.

HoloPatch®

Unique to Magicard, HoloPatch® cards have a highly reflective gold 'super diffuser' seal. When the HoloKote® watermark is printed on to the seal, the watermark becomes clearly visible under all lighting conditions. HoloKote® with HoloPatch® has a similar appearance to hologram seals. It provides a security mark which is visible from a distance, allowing a security guard or colleague to easily verify badge authenticity.

Specialist security

The Magicard 600 and Magicard 300 offer additional security in the form of **Digital Shredding™** - once data has been used for the print job, it is fragmented, rendering it irrecoverable, helping to ensure the Magicard 600 and Magicard 300 are not a repository for data.

PLUS, the Magicard 600 incorporates **Threat Benchmarking** where we run security scans against the National Vulnerabilities Database and push regular updates to the device, ensuring that the printer software and associated system configuration conform to the highest levels of security.
